It can serve as a ligand for the LDL (apo B/E) receptor and for the specific apo-E receptor (chylomicron remnant) of hepatic tissues.
-I- SUBCELLULAR LOCATION: Secreted.
-I- TISSUE SPECIFICITY: Secreted in plasma.
-I- SIMILARITY: Belongs to the apolipoprotein A1/A4/E family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=9622595; PubMed=8635577;

ABN79587 represent cDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORF1-ORF4534 (collectively referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polynucleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX polynucleotides and activity, and methods of screening for modulators of ORFX expression or activity, and methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, hammacopoiesis regulation, tissue growth, angiogenesis, activin or inhibin activity, chemotactic/chemokinetic activity, thrombolytic activity,
                                                                                                                                                                                                                                                                                                                                                                                                                          Human; ORF; open reading frame; ORPX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; disease grouth; cell differentiation; dimune modulation; haematopoiesis regulation; tissue growth; angiogenesis; activin; inhibin; chemocractic; chemokinetic; fertility; thrombolytic; tumour inhibition; bodily characteristic; fertility; cardiovascular disease; immune system disorder; neurological disorder; cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; wasotropic; antipsoriatic; antidiabetic; cytosteatic; noctropic; neuroprotective; antistatherosclerotic; anticoagulant; thrombolytic; cardiant; hypotensive; antistyroid; antiinflammatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; fungicide.

receptor/ligand, antiinflammatory activity, tumour inhibition activity,
and antiinfective activity, and may also be involved in the determination
of bodily characteristics, fertility and behaviour. ORFX proteins,
cucleic acids and antibodies may be used in the treatment of cancers,
cucleic acids and antibodies may be used in the treatment of cancers,
cher proliferative disorders such as poorlasis and benign tumours,
neurological disorders such as epilepsy and Alzheimer's disease,
cardiovascular diseases, immune system disorders related to
organ transplantation, disorders of tissue growth and regeneration,
diseases such as diabetes mellitus, hypothyroidism, and cholesterol
ester getorage disease, and infections diseases caused by viral, bacterial,
ctungal and other pathogens. ORPX uncleic acids may also be used as a
source of primers and probes, in the detection of ORPX genomic sequences
cor transcripte, in the identification and cloning of homologous
cor transcripte, in the identification and cloning of homologous
cor transcripte, in the identification and cloning of homologous
cor transcripte, in the identification and cloning of homologous
cor transcripte, in the identification and cloning of homologous
cor transcripte, in the identification and cloning of complex
cordis may additionally be used to produce transgenic animals
which may be useful for studying the function and/or activity of ORFX
protein, and in drug screening. The ORFX proteins may also be used
immunogens to generate specific antibodies, which are useful in the
diagnosis, treatment and monitoring of ORFX-associated diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Apo AI polypeptide(s) and anti-Apo antibodies - used to detect Apo Ai in vascular fluid samples and increase LCAT-mediated cholesterol esterification in humans.

with an inflammatory response comprising an amphipathic helical peptide having charged residues on the polar face of the peptide and possessing a wide non-polar face. The polypeptide of the invention demonstrates antiarteriosclerotic, antiarhumatic, antiarthritic, immunosuppressive, dermatological, antiinflammatory, osteopathic, neuroprotective, notropic, anti-HIV, virucide and antibacterial activities. The composition and methods of the invention may be useful in preventing or ameliorating one or more symptoms of atherosclerosis and/or pathologies characterised by an inflammatory response such as rheumatoid arthritis, systemic lupus exthematosus, polyarterifis nodosa, osteoporosis, Alzheimer's disease, AIDS or inflection. The current sequence is that of the apoAI G* amphipathic helical domain-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Apo AI contains the sequence below (Claim 1 claims AAs 1-15). There is a inverse correlation between plasma levels of Apo AI and coronary artery disease risk. The monoclonal antibody recognises this epitope on native Apo AI. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Apo lipoprotein peptide and monoclonal antibody against it - used to assay peptide in vascular fluid to identify risk of coronary artery

                            The peptides represented in AAR20164-65 are capable of immunologically mimicking an Apo AI epitope. They are useful in diagnosis and detection of Apo AI in fluids and for preparing anti-Apo AI antibodies. It is useful in therapeutic methods for increasing LCAT- mediated cholesterol esterification in humans. The Apo AI polypeptide is selected from the peptides indicated in the features and includes amino acids 13-28 defining a conserved native epitope on Apo AI capable of immunoreacting with monoclonal antibody MAB AI-11.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a browsable database system for use with biological information, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recogniser and an output. The invention also provides a method of operation for use with a browsable biological database system. The browsable database system and methods are useful in analysing protein sequences, classifying gene products, predicting biological role for pathway building, enhancing interpretation of expression information, providing protein function and in facilitating comparative genomic analysis. The present sequence is human apolipoprotein A (APO-A) IV precursor protein. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      36 SALGKOLNIKLLDNWDSVTSTFSKIREQLGPVTQEFWDNLEKETEGLRQEMSKDLEEVKA 95

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Browsable database system, for e.g. analyzing protein sequences, and predicting a biological role, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recognizer, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a browsable database system for use with biological information, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recogniser and an output. The invention also provides a method of operation for use with a browsable biological database system. The browsable database system and methods are useful in analysing protein sequences, classifying gene products, predicting biological role for pathway building, enhancing interpretation of expression information, providing protein function and in facilitating comparative genomic analysis. The present sequence is monkey apolipoprotein A (APO-A) IV precursor protein. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     36 SALGKOLNLKLLDNWDSVTSTFSKLREQLGPVTQEFWDNLEKETEGLRQEMSKDLEEVKA 95

This sequence represents a peptide (#2) derived from apolipoprotein (apo)
A-IV with lipid oxidation inhibitory activity. Lipid oxidation plays a
Cotal in the development of atherosclerosis, a main cause of coronary
cotal in the development of atherosclerosis, and accumulation of foam
cells along with deposition of lipid and accumulation of foam
cells in the lesion. As the atherosclerotic plaque develops, it
progressively occludes more and more blood vessel and can eventually lead
colls in the lesion. Both the plasma concentration and qualitative
corporateristics of low density lipoproteins (LDD) are risk factors in
charcogenesis. Oxidation causes important changes in the primary
corporates of the main LDL apolipoprotein, apolipoprotein B100 (apo B-
corporate) with subsequent development of the atheroschaege, causes the
cintracellular accumulation of esters of cholesterol and the formation of
contracellular accumulation of esters of cholesterol and the formation of
contracellular accumulation of esters of cholesterol and the formation of
contracellular accumulation of esters of cholesterol and the formation of
contracellular accumulation of esters of cholesterol and the formation of
contracellular accumulation of esters of cholesterol and the formation of
contraction. For example, they can be used for treating or inhibiting the
progression of atherosclerosis. They can also be used for preventing
contaction in lipid-containing foods, lipid-containing pharmaceuticals or
cosmetic or dermatological compositions. As these peptides comprise
commetic or dermatological administration to humans
communicative problems with their administration to humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2 WD-----YFTQLSNNAKEAVEQLQKTDVTQQLNTLFQDKLGNINTYADDLQNKLVPF 53
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating conditions associated with lipid oxidation or preventing oxidation in lipid-containing food, lipid containing pharmaceuticals or cosmetic or dermatological compositions.

The invention also provides a method of operation for use with a browsable biological database system. The browsable database system and
                                                                                                                                                                                                                                                                                                                                                                                                                                                    methods are useful in analysing protein sequences, classifying gene products, predicting biological role for pathway building, enhancing interpretation of expression information, providing protein function and in facilitating comparative genomic analysis. The present sequence is baboon apolipoprotein A (APO-A) IV precursor protein. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           95

biological information, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recogniser and an output. The invention also provides a method of operation for use with a browsable biological database system. The browsable database system and methods are useful in analysing protein sequences, classifying gene products, predicting biological role for pathway building, enhancing interpretation of expression information, providing protein function and in facilitating comparative genomic analysis. The present sequence is pig apolipoprotein A (APO-A) IV precursor protein. This sequence is used to illustrate the method of the invention.
                                                                   Browsable database system, for e.g. analyzing protein sequences, and predicting a biological role, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recognizer, and

A187-105 and smaller peptides contained within this sequence - see FT. Such Apo AI peptides are capable of immunologically minicking a native conserved Apo AI epitope. They may be helpful in the diagnosis of risk of coronary heart disease. (Updated on 31-OCT-2002 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New synthetic peptide from apolipoprotein AIV related protein, useful for raising antibodies, used for diagnosis and treatment of disorders of lipid metabolism.
                                                                                                                                                                                                                                                            New monoclonal antibody and polypeptide antigens - directed against APO AI-HDL epitope, useful in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; hypolipemic; Apolipoprotein AIV Related Protein; AA4RP; lipid metabolism; cardiovascular disease; hyperlipidemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                       Browsable database system, for e.g. analyzing protein sequences, and predicting a biological role, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recognizer, and
                                                                                                                                                                                                                                                                                                                                           The invention relates to a browsable database system for use with biological information, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recogniser and an output. The invention also provides a method of operation for use with a browsable biological database system. The browsable database system and methods are useful in analysing protein sequences, classifying gene products, predicting biological role for pathway building, enhancing interpretation of expression information, providing protein function and in facilitating comparative genomic analysis. The present sequence is chicken apolipoprotein A (APO-A) IV protein. This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             64

                                                                                                                                                                                                                                         ઠ
                                                                                                                                                                                                                                                           2
                                          Related Protein (AA4RP). The peptide fragment is useful for raising specific antibodies (Ab) against AA4RP, so are useful in immunoassays for detecting or determining AA4RP, especially to identify subjects at risk of developing disorders of lipid metabolism (particularly cardiovascular diseases associated with hyperlipidemia, e.g. coronary disease). Ab are also useful for protein purification and, optionally when conjugated to a toxin or pharmaceutical, for treating the specified diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Browsable database system, for e.g. analyzing protein sequences, and predicting a biological role, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recognizer, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a browsable database system for use with biological information, comprises a datastore, an ontology of categories of biological functions, an input receptive, a recogniser and an output. The invention also provides a method of operation for use with a browsable biological database system. The browsable database system and methods are useful in analysing protein sequences, classifying gene products, predicting biological role for pathway building, enhancing interpretation of expression information, providing protein function and

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1, Application US/08292870

Sequence 1, Application US/08292870

Patent No. 58144671

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Banka, Carole L

APPLICANT: Manna Systems FOR QUANTIFYING APO AI, AND THERAPEUTIC

TITLE OF INVENTION: METHODS

NUMBER OF SEQUENCES: 4

CORRESPONDENCES: 4

ADDRESSEE: The Scripps Research Institute, Office of

ADDRESSEE: Patent Counsel

STRET: La Jolla

CTTY: La Jolla

STATE: California

COUNTRY: US

TITLE OF INVENTION: APO AI POLYPEPTIDES, DIAGNOSTIC METHODS

TITLE OF INVENTION: METHODS

TITLE OF INVENTION: APO AI POLYPEPTIDES, DIAGNOSTIC METHODS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 9, Application US/09695458
Patent No. 6380361
GENERAL INFORMATION:
APPLICANT: CONKIN., Darrell C.
APPLICANT: Taft, David W.
TITLE OF INVENTION: Educational Kit and Method Containing No. 6380361el Alpha Helical
TITLE OF INVENTION: Beducational Kit and Method Containing No. 6380361el Alpha Helical
TITLE OF INVENTION: Brotein-34
CURRENT APPLICATION NUMBER: US/09/695,458
CURRENT FILING DATE: 2001-09-25
PRIOR APPLICATION NUMBER: 60/162,623
PRIOR APPLICATION NUMBER: 60/162,623
PRIOR APPLICATION NUMBER: 60/162,623
RUMBER OF SEQ ID NOS: 41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä,

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein 40c - Japanese black pine chloroplast
C;Species: chloroplast Pinus thunbergiana (Japanese black pine)
C;Date: 14-May-1999 #sequence_revision 14-May-1999 #text_change 09-Jul-2004
C;Accession: T07516
R;Wakasugi, T.; Tsudzuki, J.; Ito, S.; Nakashima, K.; Tsudzuki, T.; Sugiura, M.
Proc. Natl. Acad. Sci. U.S.A. 91, 9794-9798, 1994
A;Title: Loss of all ndh genes as determined by sequencing the entire chloroplast genome
                                                                                                                                                                                                                                                                                                                                                                   A;Status: preliminary; translated from GB/EMBL/DDBJ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Vi protein I - Vibrio cholerae (fragment)

N.Alternate names: cysI protein homolog

S.Speciess: Vibrio cholerae

C.Speciess: Vibrio cholerae

C.Speciess: Vibrio cholerae

C.Speciess: Vibrio cholerae

C.SAccession: S70798

R.Camilli, A., Mekalanos, J.J.

Mol. Microbiol. 18, 671-683, 1995

A.Title: Use of recombinase gene fusions to identify Vibrio cholerae genes induced durin

A.Reference number: S70798; MUID:96414469; PMID:8817490

A.Accession: S70798

A.Status: preliminary; nucleic acid sequence not shown

A.Molecule type: DNA

A.Molecule type: DNA

A.Residues: 1-39 < CAM>
